FOR
Companies Located North America
2008

TCG-M42BC Stock Room Cardboard Baler

2008

Website Visitors

North American Market
USA & Canada

Dear Sir or Madam,

In an effort to provide to our prospective Customers information in the timeliest fashion, we respectfully submit for your consideration the following Cardboard Baling Solution. This unit will produce a tight bale of approximately 175 lbs of Recycled Cardboard. Delivery time is within 2 weeks from date of order as we generally have one or more in stock. This unit is perfectly suited for cardboard recycling and is one of the best units on the market both for its ease of operation and capital outlay requirements. There are additional balers that will produce a 260lb available. Please call us for detailed pricing.

The Compactor Guy Inc. is the Compactor Equipment leader in Canada, servicing customers with compactor and baler needs. Throughout the country we provide rentals, leasing and purchasing programs to such customers as Oshawa Foods, CHIP REIT Hotels, Cineplex Odeon, A & P Services, McDonalds Restaurants, as well as many Shopping Malls, Hospitals, Universities, Warehouses, and independent businesses in the market place.

With any offering in this quote, The Compactor Guy Inc. will provide everything necessary for a complete installation. The pricing in this proposal does not cover any additional costs should you require a Pre-Start-Up Review. Freight will be invoiced separately depending on your site location.

Should you have any questions or concerns please feel free to contact me. I look forward to continuing and enhancing our business relationship into the future.

Regards,

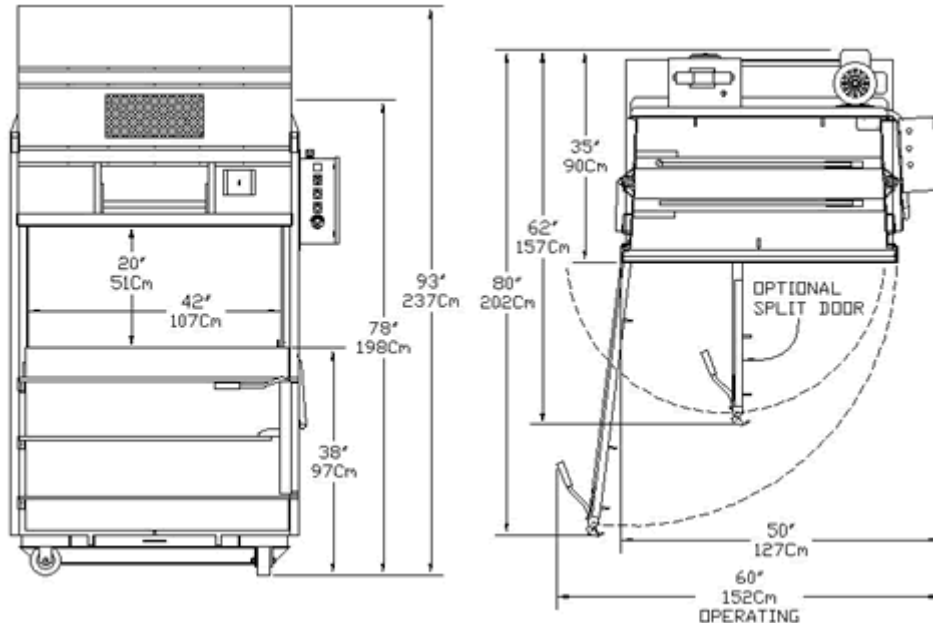

THE COMPACTOR GUY INC.

Warranty – One year parts and labor

**Errors and omissions accepted*

**Subject to Credit Approval*

Why Use a Baler?

The market for Cardboard & Plastic as with the recycled market in general, varies over time. This means that prices also vary, as the desirability of cardboard & plastic changes. Corrugated cardboard & plastic film or bottles can be accepted from recyclers in different forms. Some companies accept the product in a Gaylord, Front End Container, and Roll-Off Container or on a pallet loose or baled.

Baled material is often more desirable to recyclers, The other benefits of baling the material are that there is a reduced fire risk, less storage is required, less truck traffic on your site, reduction of haulage costs as with open or non baled material and transportation to the recycler is less expensive. In general it definitely adds overall value to the product.

The Compactor Guy Inc. will at your request provide a number of companies that you may use to receive and recycle your baled material. Please contact us for more information.

BENEFITS OF RECYCLING & BALING:

The benefits of recycling Cardboard & Plastic are similar to those of recycling other as the raw materials and the process used in its manufacture are similar, i.e.:

1. Prevents the need for virgin materials. By not felling trees, wildlife habitats are protected, preventing the loss of wildlife.
2. Less cardboard sent for final disposal will mean a reduction in the problems associated with the disposal process.
3. Less energy is used when producing recycled cardboard compared to the use of virgin materials.
4. Recycling cardboard produces fewer emissions to air and water, than production of cardboard from virgin materials.
5. Baling Material is the most efficient method of handling recyclable material. The end user or mill accepts recycled material in bales and by baling on your site you remove a step in the handling process
6. Baling Material is the most efficient method of transporting and storage of recyclable material
7. Baled Material traditionally generates the most income when selling the baled material to the recyclers.

Every MT (Metric Ton) of cardboard recycled saves:

17 trees;

7000 gallons of water;

20 cubic yards of landfill; and 4,100 kw/hours of electricity
